

Capture for VECTOR: Sort

A CHECK MANAGEMENT SOLUTION TO COMPARE GROUPS OF PARTNER ACCOUNTS WITH PROCESSED CHECKS

Capture for VECTOR: Sort allows you to lift images of items at any time during the cycle sort/exception item pull, or fine sort process. Images may be lifted on a number of criteria: cycle, pocket, account number, prime pass image suspect, exception item..

IMAGE CAPTURE “TRANSPORT TRANSPARENCY”

At last you have the freedom to choose alternative sorting hardware with the power to manage the Bulk File and Fine Sort process under the control of VECTOR: Sort. That’s what is meant by Transport Transparency — complete flexibility in machine selection and scheduling of these resources.

Moreover, you can now capture images of the checks as they are processed by VECTOR: Sort with Image-Lift. You can do this with NCR's family of transports, as well as with IBM 3890XP's equipped with the Model 4 camera.

If you are already using 3890XP's, you can add a Model 4 camera and Capture for VECTOR: Sort will capture the images without HPTS, ALS, and CIMS, thus reducing image acquisition costs dramatically in contrast to other market solutions. Capture for VECTOR: Sort operates IBM's 3890XP on a TCP/IP connected Microsoft Windows platform, eliminating channel connection expenses and enabling the images to be passed to client server archives without being staged on the mainframe.

CO-EXISTS WITH YOUR EXISTING OPERATIONAL PROCESS

Capture for VECTOR:Sort does not require extensive training of your staff — because you don’t have to change your workflow to capture images. No repass is required to capture images – in fact, even selective imaging can be accomplished without a repass. Selective image capture allows only certain items to be imaged, whether from certain accounts, certain types of transactions — or whatever other criteria you specify. It works seamlessly with VECTOR:Exceptions, VECTOR:Five and the VECTOR Research solution products.

In addition, Capture for VECTOR:Sort makes images available for your back office applications - eliminating the need for, and expense of, HPTS, ALS and CIMS. Capture all of your exception items and generate more fee income. Capture just what you need.

VECTOR: Sort and Capture for VECTOR: Sort enables our customers to cost effectively electrify the entire paper check including both the image and the data. Now they can re-architect your office operations to reduce costs and increase customer service and fees to banks.

Metavante Image Solutions is a leading provider of financial transaction processing solutions to financial institutions and corporations around the world. The world's largest banks depend on our products and services, and our suite of software products. We are highly-experienced in the electronic transactions arena and have the long-term financial stability to be a dependable partner over the long haul.
