

VECTOR: Notification

A VECTOR RETURNS SOLUTION

MANAGE EARLY WARNINGS WITH HOLDS ON SUSPICIOUS ITEMS

VECTOR: Notification automatically places a hold on the depositing account funds when notification of returns are received and sends timely notifications so that your depositors are informed. The system can be used to place holds if suspicious activity is identified.

TWO MODULES INCREASE PROTECTION

VECTOR: Notification includes two interfaces that allow financial institutions to combine the speed of their early warning systems with the power and precision of VECTOR: Notification:

- **PPS Module** – Receives account status information you have requested. Holds are placed and notifications are sent.
- **PSN Module** – Allows you to receive Alerts, Preliminary and Final SmartNOTES into the notification system. The system lets you put one-day holds on Preliminaries and longer holds on Finals; and notifications are sent. Of course, VECTOR:Notification still works with Fedwire and EARNS.

KEEPS UP-TO-THE-MINUTE RECORDS ON RETURN ITEMS

As incoming notifications are received, the notification database is updated either electronically or on-line for processing, tracking and reconciling. To ensure your bank has return information entered into the database as quickly as possible, incoming notification can be received by telephone, third party notification services, Fedwire, fax or telex, can be entered into the system.

CUSTOMIZE HOW RETURNS ARE HANDLED

Because every bank's requirements are different, Metavante Image Solutions has designed

VECTOR: Notification to allow your institution to customize the system to meet your particular needs. VECTOR: Notification will access the special instructions you create in VECTOR: Five to control the handling of notifications according to your unique requirements, bank policy and your customers' preferences.

AUTOMATES NOTIFICATION

When interfaced with VECTOR: Exceptions, all required high dollar fields are input once, at the point of BOFD input. This data is then automatically passed through VECTOR: Notification to the reporting entity; EARNS, Fedwire, etc.

PROOF OF NOTIFICATION

The information then remains on-line so you can view, update and browse the entire database to determine the exact status of notifications across multiple days. This provides an audit trail that provides proof of timely notification. VECTOR: Notification is a seamless part of the VECTOR Exceptions and Returns product suite.
