

VisionContent: Reports

Provides enterprise access to reports and statements

reports are available immediately, without the need to launch a separate application.

Reduce Costs for Storage and Retrieval

For years, Metavante has been providing effective solutions that help our customers solve critical business problems. The VisionContent: Reports solution is a robust application for managing reports and statements. The application is among our longest-running solutions, with successful installations at thousands of financial institutions across the country.

Metavante's VisionContent: Reports is a powerful Enterprise Report Management/Computer Output to Laser Disc (ERM/COLD) solution that offers high-volume, high-speed storage and retrieval of mission-critical report data. The system, designed with financial services professionals in mind, provides access to information in a variety of ways, including client-server, mainframe, and AS/400 environments.

In addition, we offer IS View, our browser-based client that provides enterprise access to the most current report information available. Through IS View, financial services professionals can instantly retrieve, view, annotate, and export job-related reports residing in the system. With no installation necessary on the client side, financial institutions can provide access to branches and remote locations with minimal effort required on the part of the IT staff.

We also offer the optional VisionContent: Reports - Retriever module to provide quick and easy access to reports from within a financial institution's other systems. For users, there is virtually no learning curve –

Features

- **Browser-based client** – Enables users to quickly retrieve report information from branches and remote locations. It is easy to install, maintain, and navigate, because the viewer requires no installation or maintenance on the desktop. Users simply log on with a name and password and are ready to view reports.
- **Report subscriptions** – Provides e-mail links to report updates for users who regularly access specific types of reports.
- **User profiles** – A system administrator can create user profiles with pre-configured favorites, quick searches, and available reports lists.
- **Disaster recovery** – Protects enterprise reports with high-availability disaster recovery and permanent report storage mechanisms from the VisionContent: Report distributed database architecture and Multiple Target Archive.
- **Industry-leading report-processing times** – High-speed processing allows financial institutions to quickly and automatically process reports outside of normal business hours.
- **Multiple reporting options** – Administrators can record reports from z/OS, VSE, AS/400, and Windows.
- **Check image integration** – Eliminates the need to do additional searches for check images by hyperlinking check numbers inside a report to the related images contained in a check imaging system.

VisionContent: Reports

- **Application integration option** – Access reports quickly from within core systems or teller platforms without launching a separate application, providing your users with seamless integration and easy access to reports.
- **Enhanced security and administration** – Administrators can generate reports that monitor system and user activities, including detailed usage statistics and login errors.
